

Sarratt Septic provides services to residential and commercial customers.

- Subsurface operations contracts
- Homeowner operations training
- Fiberglass repair
- Alternative drainfield locations
- Design for alternative approvals
- Installation, inspection & repair
- Septic drainfield under asphalt/concrete w/Cultec chambers

Sampling

I can sample for:

- Biological Oxygen Demand
- Dissolved oxygen
- Fecal Coliform
- Nitrogen
- Phosphorus
- Total suspended solids

County Health Department Meetings

Just ask. It is no big deal. Even for little things, I prefer to develop relationships and meet face-to-face.

Emergency

Please be clear that this is an emergency situation and I will do my best to quickly rearrange my schedule.

Non-Emergency

Fridays and Saturdays are the easiest days for me.

Health Department System Reviews

If at all possible, I would prefer to correlate my operations activities with your 3yr/1yr/6mo system reviews. I will contact you when I have a system visit scheduled.

Homeowner Operations Training

System owners are welcome to:

- Watch me
- Take notes
- Ask questions
- Take pictures
- Take video

When the homeowner has passed the subsurface exam I am happy to serve as a consultant until they are comfortable operating their own system.

Requested Certifications

If a homeowner asks me to do operations on a system for which I am not certified, I go get the certification.

Industry Certifications

- Cultec Plastic Chambers
- Infiltrator Chamber Systems
- Presby Advanced Enviroseptic Certification

Industry Certifications—In Process

- American Manufacturing—Upon first system installation
- Anua/Bord Na Mona Peat—Fall 2019
- E-Z Treat—Fall 2019
- Norweco—Winter/Spring of 2020

Historically Non-Paying Homeowners

I am willing to work with home or business

owners who have a history of not paying for subsurface operations services.

- I require payment before my services are rendered
- If the homeowner requests, funds can be place in an escrow account. The system owner pays any escrow fees.

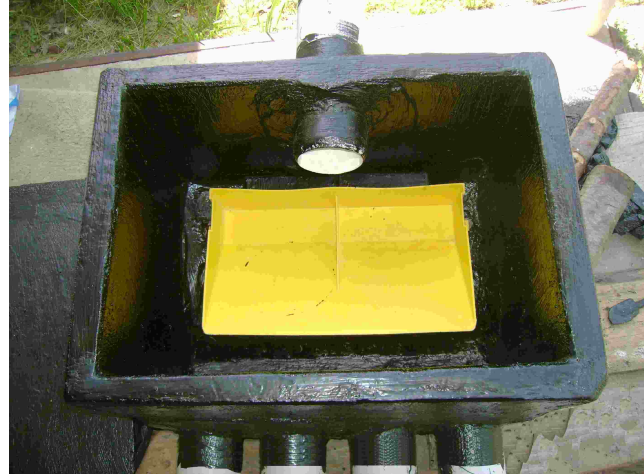

Unique Services

Keeping The Trees

I work with an arborist on the drainfield design and utilize a permeable fabric/chemical barrier to stop root growth. This allows homeowners to keep some—or all, of their trees.

Tipping/Dipping Distribution Boxes

I manufacturer these. They are concrete with a plastic tipping tray. Tipping distribution boxes equally dose two or more drainfield lines. They work excellently!

Fiberglass Repair

If the tank has a hole or if it is broken in half, if it is fiberglass it can probably be repaired. If I can not repair the tank or if my repair fails, I will refund my fees. Cost: By the job, but generally \$100/hr plus expenses and equipment costs for excavation.
